

## Special Issue

# Protein–Protein Interactions in Human Cancer

### Message from the Guest Editor

Many proteins perform their biological functions, such as transmitting signals and implementing positive or negative regulation, by interacting with other proteins. Due to genetic mutations (inherited or sporadic), proteins encoded by these genes undergo loss-of-function or gain-of-function mutations that induce changes in protein–protein interactions and protein dysfunction, thus contributing to various diseases in humans. Therefore, a thorough understanding of protein–protein interactions related to human diseases is crucial for both discerning the complex mechanisms by which proteins carry out their functions and developing therapeutic approaches to combat these severe diseases. This Special Issue welcomes the submission of original research articles, short communications, and reviews.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
