# Application and Formulation of Therapeutic Natural Deep Eutectic Solvents

### Message from the Guest Editor

Natural deep eutectic solvents (NADESs), made up of therapeutic compounds such as hydrogen bond acceptors or donors, have recently emerged as an attractive formulation strategy for enhancing the solubility of poorly soluble drugs. Owing to their liquid-like amorphous form, the application of therapeutic NADESs has been limited to transdermal drug delivery. There are unmet research needs in the formulation of therapeutic NADESs for oral delivery. The ability to formulate therapeutic NADESs into oral dosage forms will open up their application to greater disease variety beyond transdermal therapy. In this Special Issue, we will present the latest research on the formulation of therapeutic NADESs beyond transdermal liquid suspension and also their newly found application for a wide range of diseases.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
