Psoriasis: Molecular Pathologies, Lipid Disturbances, Diagnosis and Therapeutic Strategies

Message from the Guest Editor

The treatment of psoriasis has come a long way, from the use of simple ointments like anthralin to the advanced biologic therapies that we rely on today. These improvements have greatly helped patients, but there is still so much we do not fully understand about psoriasis. The causes of the disease and how it is connected to other health problems remain areas that need more research. Among the most intriguing connections is the role of lipid disturbances. These disruptions not only underscore the complex interplay between psoriasis and metabolic disorders but also offer valuable insights into the broader systemic effects of the disease. Alongside lipid disturbances, molecular mechanisms, including genetic, epigenetic, and inflammatory pathways, play a crucial role in shaping the clinical course of psoriasis and its associated conditions. This Special Issue, "Psoriasis: Molecular Pathologies, Lipid Disturbances, Diagnosis and Therapeutic Strategies", aims to explore these important topics. We want to dive deeper into the molecular aspects of psoriasis, its link with lipid problems, and new ways to diagnose and treat the disease.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
