Mechanism and Regulation of Pre-mRNA Splicing

Message from the Guest Editor

In eukaryotes, most gene transcripts or pre-mRNAs are interrupted by intervening sequences termed introns, which are precisely removed by a process called splicing. This process is essential since spliced mRNAs serve as templates for proteins. Regulation in the splicing process is certainly crucial for a wide variety of biological and physiological phenomena. The process is therefore highly discriminatory and faithful, and mis-regulation in this process causes disorders in cell functions, often with severe clinical consequences. This Special Issue will cover, but is not limited to, the following topics:

The mechanism and regulation of constitutive and alternative splicing; The mechanism and regulation of splicing-linked post-splicing processes; Pre-mRNA-protein interactions involved in splicing and splicing-linked processes; hnRNP/mRNP assembly and functions in splicing and splicing-linked processes; Evolutional studies of pre-mRNAs and splicing; Pre-mRNA processing in development and diseases including cancers.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
