Plant Secondary Metabolites in Plant Defence against Abiotic and Biotic Stresses

Message from the Guest Editor

Dear colleagues,

Being sessile organisms, plants are continuously exposed to stressful conditions that can hamper processes of 'primary' carbon metabolism, such as photosynthesis and respiration. Therefore, plants evolved multiple biosynthetic pathways that can produce a plethora of 'secondary' metabolites (e.g., volatile organic compounds, anthocyanins, carotenoids) with key physiological and ecological roles. Plant secondary metabolites can act as antioxidants and directly defend plants by quenching and modulating the production of reactive oxygen species (ROS), or indirectly induce physiological mechanisms to enhance tolerance/resistance to stresses. Moreover, secondary metabolites can modify insect behavior and plant-associated microorganisms (bacteria, fungi, viruses), thus further orchestrating the interaction between plants and the surrounding environment.

This Special Issue will collect research results focusing on different aspects of plant secondary metabolites, from their biosynthesis in both the above- and belowground plant parts, to their involvement in signaling, immunization, priming, and cross-tolerance against (abiotic and biotic) stresses.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
