

## Special Issue

# Multiple Actions of Melatonin on Improving Female and Male Reproductive Health

### Message from the Guest Editor

The goal of this series of papers is to comprehensively summarize, either by means of original papers, mini-reviews or more extensive reviews, the role of melatonin in regulating the normal physiology and the pathophysiology of both the female and male reproductive systems. There is a large amount of new data that have accumulated in this important research field that have veterinary and clinical applications in species from fish to humans. It is the aim of submitted papers to encourage further studies in this field with the hope that this will advance the use of melatonin to ensure improved reproductive outcomes and a reduction in the loss of critical resources.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
