NMDA Receptors in Health and Diseases: New Roles and Signaling Pathways

Message from the Guest Editor

Among glutamatergic receptors, the NMDA receptor is crucial for neurons—from cell migration and synaptogenesis, to learning, memory and cell death. NMDA receptor is a channel receptor allowing Ca^{2+} influx and the activation of downstream signaling pathways. In addition, its role depends on its localizations (synaptic/extrasynaptic and pre/post synaptic), adding another step of complexity. The NMDA receptor is at the crossroads of neurodegenerative-diseases-mediated cell death—including stroke, Alzheimer's disease, Parkinson's disease, multiple sclerosis, and others—and psychiatric and behavioral disorders. Many pathways are impacted by NMDA receptor dysfunctions—obviously calcium-related pathways such as CAMK II and CREB pathways, but also “unexpected” pathways such as ER stress, autophagy, and inflammation-related pathways. Among others. The aim of the current Special Issue on “NMDA Receptors in Health and Diseases: New Roles and Signaling Pathways” is to highlight recent advances in NMDA receptor functions and signaling and their implications in the normal and pathologic brain.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
