Natural Products as Metabolic Modulators in the Tumor Microenvironment

Message from the Guest Editor

Targeting signal transduction in cancer metabolism, including glucose, fatty acid, and amino acid metabolism, has emerged as a promising avenue in cancer therapeutics. It is important to understand how cancer cells reprogram their metabolism to proliferate and gain survival advantages in the complex tumor microenvironment. Hence, modulating cancer metabolism in the tumor microenvironment and their metabolic crosstalk with other cells could represent a potential anticancer therapeutic strategy. The use of natural products for this endeavor is especially promising since bioactive compounds from natural products may reshape the metabolism of various cells in the tumor microenvironment, providing anti-tumor immunity. This Special Issue, "Natural Products as Metabolic Modulators in the Tumor Microenvironment", welcomes original research and review articles addressing the latest advances and emerging trends in anticancer therapies using natural products. Topics include, but are not limited to: targeting cancer metabolism, signaling pathways in regulating cancer metabolism, immune metabolism in the tumor microenvironment, and modulating the tumor microenvironment.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
