New Molecular Insights into Neurocutaneous Syndromes

Message from the Guest Editor

Neurocutaneous syndrome is a category of genetic disease characterized by both skin and brain lesions with tumor formation, which comprises neurofibromatosis type 1 (NF1), tuberous sclerosis complex (TSC), Sturge–Weber syndrome (SWS), and various other disorders. In recent years, causative genes of these syndromes have been identified, and these molecules have been revealed to commonly regulate RAS/MAPK and PI3K/mTOR pathways, which are also shared with cancer. This has led to the emergence of a new concept based on which neurocutaneous syndromes have a common molecular basis as a framework, and clinical application of molecular targeted drugs such as mTOR inhibitors has been done. SWS (GNAQ) and some rare RAS mutation syndromes are caused by specific gain-of-function mutations as somatic mosaicism. In this Special Issue, we will focus on new molecular insight of neurocutaneous syndromes, welcoming all those studies on more sophisticated genetic diagnosis, analysis of molecular pathway dysfunctions and cross-talking abnormalities associated with gene mutations, and quest for possibilities of new molecular targeted drugs.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
