

## Special Issue

# Novel Agents and Molecular Research in Multiple Myeloma

### Message from the Guest Editor

The last 4–5 years have ushered in a new era in multiple myeloma (MM) research, with the advent and approval of new drugs with different targets and mechanisms of action. Additionally, an improved understanding of the immune system in patients with hematologic malignancies has resulted in major progress in the development of immune therapies for the treatment of patients with MM, including bispecific T-cell engagers and CAR-T cell approaches. At the same time, there is an increasing understanding of MM tumor biology, creating rationales for new combinations of drugs and new therapy developments. This Special Issue aims to focus on novel agents and their combinations. Focus will be placed on the efficacy of novel therapeutics and promising combination approaches to further improve outcomes in the treatment of patients with MM. We welcome the submission of original research articles, reviews, case reports and case series.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
