Oxytocin: Involvement in Metabolic Disorders

Message from the Guest Editor

Osteoporosis, osteoarthritis, and overweight/obesity constitute major worldwide public health burdens. Aging is associated with immunosenescence, a decrease in hormonal secretion, lean mass and bone mass, and an increase in fat accumulation. Mesenchymal stem cells represent a common precursor for adipocytes, osteoblasts, and chondrocytes. Obesity, osteoporosis, and osteoarthritis are affected by genetic, environmental factors, and life style. Oxytocin belongs to the pituitary hormone family and regulates the function of peripheral target organs. It also modulates a wide range of behaviors, such as social recognition, love, and fear. The levels of oxytocin decrease with age and are under the control of estrogens. An established crosstalk between bone, adipose tissue, cartilage, and muscle has been evidenced. Several reports, published recently, show clearly that oxytocin could play an important role in the control of metabolic disorders, as well as in autism and Prader–Willi syndrome. Efforts are made to develop an OT-based therapy despite its very rapid turnover.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
