Peripheral Artery Disease: From Molecular Mechanisms to Therapeutic Approaches

Message from the Guest Editors

Peripheral artery disease (PAD) refers to atherosclerosis causing impaired blood flow in vessels outside the heart, most commonly affecting arteries of the lower extremities. There are two classic clinical presentations of PAD: intermittent claudication and critical limb ischemia. Individuals with intermittent claudication typically present with pain with ambulation that is relieved by rest, while those with critical limb ischemia (CLI) present with pain at rest and often have associated ulceration or gangrene. This form of PAD is associated with a high risk of limb amputation and death. The prevalence of PAD is now estimated to be higher than that of ischemic heart disease and cerebrovascular disease combined. Unlike ischemic heart disease and cerebrovascular disease, less is known about the molecular mechanisms driving the development of PAD. Moreover, diabetes, smoking and aging are critical drivers of PAD but how these factors contribute to PAD development and poorer outcomes in PAD is not well known. Currently, there are no effective medical treatments addressing the key issues in PAD, which are impaired blood flow and limb ischemic injury.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
