Bacterial Plasma Membrane Dynamics

Message from the Guest Editor

Dear colleagues, The cell cycle mechanism of bacteria has not been studied as much as that of eukaryotic cells. For example, little research has been done on the relationship between DNA replication and plasma membrane biosynthesis. Studies on enlargement of bacterial protoplasts or spheroplasts showed that plasma membrane and outer membrane biosyntheses require metal ions and DNA replication together with generating vacuoles in the cytoplasm. How do those bacterial protoplasts or spheroplasts maintain the electron transport chain system during enlargement of the plasma membrane? This research topic focuses on the bacterial plasma membrane dynamics, which includes its evolution, function, and structure.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
