Peptide Antimicrobial Agents 2.0

Message from the Guest Editors

The ever-increasing episodes of antibiotic resistance in bacteria and other microorganisms pose a serious threat to human health. Antimicrobial peptides (AMPs) are ribosomally synthesized natural antibiotics produced by nearly all organisms, from bacteria to plants and animals. AMPs are the first line of innate defense present in most living organisms, from bacteria to humans, against invading pathogens. Certain AMPs show an exceptionally broad spectrum of activity against Gram-negative and Gram-positive bacteria and fungi as well as viruses and parasites. Therefore, AMPs or their derivatives may represent potentially new classes of antimicrobial drugs. In this context, antimicrobial peptides (AMPs) have emerged as promising alternatives owing to their unique structural and functional characteristics. They have various modes of action; this diversity in the activity of the AMPs lead to the very-slow or negligible development of resistance against them in contrast to conventional antibiotics, which generally have a fixed intracellular target. This has led to significant advances in the area of AMP research in the last few decades for potential drugs of the future.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
