

## Special Issue

# The Plasma Membrane-Cytoskeleton Interface

### Message from the Guest Editor

The plasma membrane–cytoskeleton interface is the locus where receptors and signaling molecules (e.g., ion channels, G-proteins, and enzymes) are anchored to the membrane and intimately associated with the subjacent actin meshwork undergoing constant remodeling. In the current Special Issue, we invite reviews and research articles that address molecular events related to the dynamic changes of the plasma membrane–cytoskeleton interface. Any articles dealing with basic research, translational research, and clinical studies on the given topic are welcome.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
