Pathological and Molecular Markers for Diagnosis, Prognostic and Therapeutics of Prostate Cancers

Message from the Guest Editor

Prostate cancer (PC) is the second most frequently diagnosed cancer and the fifth leading cause of cancer death among men worldwide. The diagnosis and treatments of prostate cancer continue to evolve rapidly, based on the understanding of the genomic landscape and biology of prostate cancer. Under these circumstances, identifying the effective biomarkers for prognosis and therapeutics became a major focus, leading to the improvement of outcomes and selection of patient-specific therapeutics. High-risk prostate cancer has been defined by a patient's Gleason score, PSA level, and clinical T stage; however, a novel marker is needed. Recently, the presence of intraductal carcinoma of the prostate has been considered to be important based on clinic-pathological and/or genetic analysis. This Special Issue focuses on "Pathological and Molecular Markers for Diagnosis, Prognostic and Therapeutics of Prostate Cancers", including the potential new markers based on pathology or molecular biology. We welcome submissions including research articles and review articles on the widely discussed topics.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
