Special Issue

Topoisomerase Inhibitors: Future Perspectives and Challenges

Message from the Guest Editors

The means by which topoisomerases regulate DNA (and RNA) topology by cleaving one or both strands of a duplex are questions which small molecules can help to answer. New anticancer and antibacterial compounds that stabilize DNA-cleavage complexes or compete for the ATP binding site of human or bacterial topoisomerases have been identified and are being developed. The anticipated approval of the NBTI depotidacin to treat uncomplicated urinary tract infections (UTIs) and the successful completion of the SPT zoliflodacin Phase 3 trial to treat gonorrhea will expand the chemotype and resistance profiles of antibacterial topoisomerase drugs. The benefits for patients of new topoisomerase inhibitors depend on improving both target and mitigating non-target activities. Hence, this Special Issue will attempt to answer the question of what new chemotypes and classes of topoisomerase inhibitors will emerge as drugs in the 21st century. This Special Issue focuses on topoisomerase inhibitors and welcomes both original research articles and review papers to advance our understanding of topoisomerase inhibitors and their development primarily.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
