Pathogenesis and Immunology of Cytomegalovirus

Message from the Guest Editor

Cytomegalovirus (CMV), alias human herpes virus 5 (HHV5), is a double-stranded deoxyribonucleic acid (DNA) virus contagious to humans via saliva, urine, blood, and breast milk. In 1990, the first draft of the human CMV genome was published, the biggest contiguous genome sequenced at that time. Today, CMV is still the virus most frequently transmitted to a developing fetus, and congenital CMV, the leading infectious cause of deafness, learning disabilities, and intellectual disability in children, can even be deadly. In fact, CMV infection is typically silent in healthy subjects, but it can become life-threatening for the immunocompromised. After infection, CMV remains latent throughout life and can be reactivated at any circumstance of immunosuppression, causing pneumonia, hepatitis, colitis, esophagitis, encephalitis, retinitis, infectious mononucleosis-like syndrome, or CMV polyradiculomyelopathy (PRAM). Some authors have also advanced molecular roles in inflammaging, immunosenescence, atherosclerosis, and oncogenesis. The aim of this Special Issue is, therefore, a full immersion in the pathogenesis and immunology of CMV.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
