Innovative Molecular Target and Therapeutic Approaches in Nonalcoholic Fatty Liver Disease/Nonalcoholic Steatohepatitis (NAFLD/NASH) 4.0

Message from the Guest Editors

Nonalcoholic fatty liver disease (NAFLD) is among the most common liver diseases worldwide, affecting up to 20–30% of the human population. NAFLD is usually associated with the metabolic syndrome that is characterized by increased abdominal fat, insulin resistance, high blood pressure, and high blood triglycerides. In about 10% of individuals, NAFLD progresses to steatohepatitis (NASH), with a long-term risk of cirrhosis and hepatocellular carcinoma, among the most important causes of liver transplantation in US with consequent relevant social and economic impact. Nonetheless, specific pharmacological targets and treatment have not been found yet, leaving important medical needs still to be met. The Special Issue, “Innovative Molecular Target and Therapeutic Approaches in Nonalcoholic Fatty Liver Disease/Nonalcoholic Steatohepatitis (NAFLD/NASH)”, of the *International Journal of Molecular Sciences*, will include a selection of original research papers and reviews on novel molecular and cellular targets to prevent and treat NAFLD. This Special Issue will also include an update on the management of liver steatosis, inflammation, and fibrosis.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
