## Molecular Biology of Spermatozoa

### Message from the Guest Editor

The spermatozoon is a very special cell; it is generated in the male reproductive tract, and has to travel to the female reproductive tract, of another individual, to fertilize an egg. This amazing journey, however, has to be able to respond and adapt to dramatically changing environments. Thus, empirical approaches for sperm conservation are being substituted by approaches based in translational research. As a transcriptionally-silent cell, spermatozoa largely depend on post-translational modifications of proteins to regulate their functions; among these regulatory mechanisms, redox regulation plays a relevant role, and deregulation of redox homeostasis is behind male factor infertility. With the incorporation of “omics”, lipidomics, epigenomics, proteomics, and metabolomics to the study of the spermatozoa, the knowledge of sperm function has increased significantly in the last decade; developments in image analysis and advanced flow cytometry have also significantly contributed to this advance.

---

### Guest Editor

Prof. Dr. Fernando Juan Peña Vega

Laboratory of Equine Reproduction, Department of Medicine, Faculty of Veterinary Medicine, University of Extremadura, Avd de la Universidad s/n, 10003 Cáceres, Spain

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,  
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle  
Marche, Via Ranieri 65, 60100 Ancona, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
