Roles of Sulfatases and Sulfotransferases in Fundamental Biological Processes

Message from the Guest Editor

Identification of the roles of sulfatases, sulfotransferase enzymes, and sulfated glycosaminoglycans (GAGs) in signaling, transcription, and cell differentiation has focused on the mechanisms of action in well-defined biological systems. Together, sulfatases, sulfotransferases, and sulfated GAGs confer remarkable specificity in the regulation of vital processes in plants, microbiota, and macrobiota. The specific, chemically precise recognition signals attributable to localized sulfates can influence vital cell processes in immunity and host cell responses to infection, as well as in activation/inactivation of steroid hormones, coagulation, drug metabolism, and cell signaling. The articles in this issue on this topic will reveal the range of effects of sulfation, outline what is known about the underlying molecular and biochemical pathways, and suggest avenues for future investigations. Keywords:

- Sulfatase
- Sulfotransferase
- Heparin
- Chondroitin Sulfate
- Sulfated Glycosaminoglycans (GAGs)
- Sulfation

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
