Novel PET Radiopharmaceuticals: Molecular Probes for Personalized Imaging, 2nd Edition

Message from the Guest Editor

The emerging role of novel radiopharmaceuticals for PET imaging allows for the opportunity to investigate and depict many diseases, enlarge the fields of application of PET/CT and PET/MRI from oncology to infectious diseases and neuro-oncology, and to evaluate neurodegenerative diseases. For this reason, the accurate knowledge of the synthesis, availability, and in vivo biodistribution of these novel molecular probes is of utmost importance for physicians and professionals. Beyond scientific papers focused on specific clinical settings, an accurate collection of PET tracers in a single volume is still missing; it is necessary to cover all aspects of these tracers in order to assess their biochemical peculiarities, diagnostic overlapping, and efficacy. For these reasons, a monography with several chapters on the peculiar aspects of these molecular probes is needed. Suitable topics include, but are not limited to, the synthesis, kinetics, biodistribution of PET radiopharmaceuticals, and their current applications.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
