Targeted Therapies in Cancer: Radionuclides, Multi-Omics and Nanomedicine

Message from the Guest Editor

Theranostics utilizes the same active pharmaceutical in patient selection in both in vivo diagnosis and in active therapy. This is an essential part of precision oncology, which identifies new forms of cancer and guides individual treatments. Multiomics approaches include the use of genomics, transcriptomics, proteomics, metabolomics, epigenomics, and phenomics data to explore the complexity of a disease-associated biological network, to predict prognostic biomarkers, and to identify new targeted drugs for individual cancer patients. In this Special Issue, targeted radionuclide therapies will specifically be reviewed and new original research in this field will be presented. Similarly, new target selection in diseases without current effective management is warranted. Multidisciplinary approaches with multifunctional targeted nanomedicines combine carriers with active pharmaceuticals. These transport the drug to the target tissue and can release the payload in a controlled manner. Thus, nanomedicines that penetrate deep in cancer tissue and target specific cells have been adapted in clinical trials. All research within the abovementioned topics is welcome.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
