Transcriptional Control of Metabolism in Cancers

Message from the Guest Editor

Nuclear receptors, including steroid hormone receptors, regulate the transcription of their target genes with the help of coregulators that bind to the receptors in a ligand-dependent manner. Through the regulation of their target genes, nuclear receptors and their coregulators are involved in a broad range of cellular pathways, such as proliferation and differentiation, but also metabolism. In this Special Issue, we are pleased to invite original manuscripts that focus on the role of hormone nuclear receptors and their coregulators in cancer metabolism at the molecular level.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
