

Special Issue

Genetic Analysis Based on CRISPR/Cas9 Technology: 2nd Edition

Message from the Guest Editors

Recently, many papers have reported on studies utilizing gene editing technology using the functional genes of plants and animals. These reports suggest that gene editing technology has excellent genome editing tools and is applicable to most organisms. The ways in which mutations are obtained through gene editing such as KO, KI, NHEJ and HDR, and how this affects the expression of many other genes in the genome, as well as genetic analysis is interesting. We will be accepting papers discussing how to use the genetic resources to solve genetic problems, and apply them to new breeding programs through gene editing technology. This Special Issue of the *International Journal of Molecular Sciences (IJMS)* welcomes reviews and research results.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
