

## Special Issue

# Advanced Molecular Research on Chronic Heart Failure

### Message from the Guest Editor

Chronic heart failure (CHF) is a complex syndrome marked by the heart's inability to meet the body's metabolic needs, posing a major challenge in cardiovascular medicine. Despite treatment advances, the molecular mechanisms underlying CHF remain poorly understood, hindering the development of targeted therapies. Notably, 30–70% of CHF patients present with heart failure with preserved ejection fraction (HF-pEF), a growing clinical issue. Among these, cardiac amyloidosis (CA), once considered rare, is now recognized in about 15% of HF-pEF cases. This Special Issue seeks research on molecular insights and clinical strategies for CHF. Topics include molecular pathways in CHF, advanced imaging techniques, biomarkers, translational research, and emerging treatments. Special emphasis is placed on CA, a key contributor to HF-pEF and a rising clinical challenge.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
