T Cell Immunity in Emerging Respiratory Viral Infections: Mechanisms, Dysregulation, and Therapeutic Targets

Message from the Guest Editor

Coronavirus infection induces activation of acute and chronic immune responses, to both of which T cells, both innate (such as gammadelta-T cells, NK T cells and ILCs) and adaptive (alphabeta-T cells) subsets, make indispensable contributions. T cell-mediated protective effects can be realized by secreting anti-viral cytokines or immune cell-recruiting chemokines, killing infected cells, as well as regulating inflammation caused by infection. Compared to virus-specific antibodies, virus-specific T cells recognize conserved epitopes of virus, thus favoring the elimination and control of immune-escaping variants, such as SARS-CoV-2 variants of concern. On the other hand, dysregulated T cell-mediated responses may lead to excessive tissue damage and represent potential targets for treating immunopathology caused by coronavirus infection, especially in highly susceptible populations, such as the elderly and those with co-morbidities. Clarifying the role of T cells and their effects during both acute and chronic phase of coronavirus infection is still in urgent need for developing next-generation strategy to prevent and treat coronavirus infection-associated diseases.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
