# Unraveling Pancreatic Cancer: Pathogenesis, Development, Diagnostic and Treatment

### Message from the Guest Editor

Pancreatic cancer is, worldwide, the 6th most frequent cause of cancer death. Of all cancers it has the most abysmal five-year survival rate. This is due to a lack of sufficiently early detection methods and the fact that, if detected, the cancer has already spread. Analyzing the common genetic changes demonstrate a rather monotone set of mutations, typically in KRAS, SMAD4, TP53 and CDKN2A. This has resulted in a resurrection of the importance of an understanding of epigenetic changes and has led to the introduction of pancreatic cancer subtypes, which might need different treatment approaches. With the advent of organoid culture methods, pre-testing for chemo resistance might be feasible to adjust therapeutic regimens and can be used to establish new genetic signatures for resistance. Together with improved immuno-oncology approaches, this knowledge of molecular changes in pancreatic cancer might considerably improve survival rates. Looking forward, the area of improvement is vast and, within this Special Issue, we would like to show novel concepts for the diagnosis and treatment of pancreatic cancer based on new molecular biology insights.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,  
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle  
Marche, Via Ranieri 65, 60100 Ancona, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
