# Advances in G Protein-Coupled Receptors

## Message from the Guest Editor

The humble G protein-coupled receptor is responsible for a considerable proportion of the world's pharmacopeia since its initial discovery. Each year since its landmark discovery, GPCRs have demonstrated their near-endless versatility with respect to the control of human physiology. To pay homage to this tremendously diverse capacity we intend to form, this Special Issue of *IJMS* stands as a collection of some of the most intriguing and innovative research articles that demonstrate the latest nuances of the GPCR signaling and therapeutic repertoire. To this end, I welcome the submission of both basic and applied science articles relevant to the most up-to-date aspects of GPCR functionality.

# Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
