

## Special Issue

# Newly Emerging or Re-emerging Viruses as a Potential Threat to Humans

### Message from the Guest Editor

Viral infections constitute a global burden on healthcare and are a leading cause of morbidity and mortality. In the past decade, the emergence and re-emergence of RNA viral infections caused by Ebola, Nipah, Flaviviruses, Dabie bandavirus, Influenza, and more recently, SARS-CoV-2, among others, have had devastating public health implications. Most of these pathogens are of zoonotic origin or are vector-borne, and given their evolvability and immense adaptive capacity, they continue to pose a global health threat. This is exemplified by recurring local outbreaks and pandemics. In this Special Issue, we focus on the broad range of emerging and re-emerging viral infections, with emphasis on human pathogens. Authors are welcome to contribute manuscripts that study or analyze the replication cycles and pathogenesis of these pathogens, or therapeutic and new advancements in vaccination strategies and molecular diagnostic techniques.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
