

## Special Issue

# Wound Healing and Hypertrophic Scar

### Message from the Guest Editor

Hypertrophic scar is the most common complication of burn injury. Scars develop in wound healing. Wound healing and hypertrophic scars involves complex biological processes, and the exact mechanisms remain to be fully elucidated. Scar management is a major goal of rehabilitation. To achieve this goal, it is necessary to deeply understand the relevant clinical, histopathological, and molecular feature of scars and to understand how these manifestations relate to each other. This Special Issue will cover a selection of recent research topics and current review articles in the field of scar research in wound healing and all kinds of tissues. Experimental papers, up-to-date review articles, and commentaries are all welcome.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
