Nitric Oxide Signalling and Metabolism in Plants 2023

Message from the Guest Editors

Nitric oxide (NO) is an unstable free-radical gas which consists of one nitrogen and one oxygen atom. An explosion of research in plant NO biology during the last two decades has revealed that it is not just as a free radical released from the toxic byproducts of oxidative metabolism but that it also helps in plant sustenance when exposed to several abiotic stresses from the beneficial role of NO in plants. It also has a role as a signal molecule and transducer that functions in numerous plant growth and development processes, ranging from seed germination to root development to blossom. Some investigations have highlighted the crosstalk of NO with other gas signal molecules as well as plant hormones, such as hydrogen gas, hydrogen sulfide, auxins, gibberellins, abscisic acid, cytokinins, ethylene, salicylic acid and jasmonic acid, under normal conditions or diverse stresses. Research on NO-mediated S-nitrosylation of specific proteins and specific S-nitrosylation sites has also been carried out. This knowledge allows researchers to explain the effect and mechanism of NO in fields such as plant growth and development, abiotic stress, fruit, cut-flower, and several others.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
