

## Special Issue

# Production of Bioactive Compounds by Microbes: Biosynthetic Pathway Elucidation and Metabolic Engineering

### Message from the Guest Editors

Microbes serve as potent cell factories for the production of bioactive compounds, which could be applied in medicine, agriculture, food, cosmetics, and various industries, often with the aid of engineering tools. The elucidation of biosynthetic pathways and the application of metabolic engineering are critical for achieving the efficient production of these valuable compounds. Pathway elucidation relies on genomic sequencing, gene annotation, and experimental validation to uncover the key enzymes driving the synthesis. Metabolic engineering leverages genetic manipulation, metabolic flux analysis, and the reprogramming of microbial metabolism to enhance the titer, rate, and yield of target bioactive compounds. These strategies have been successfully implemented to produce plant-derived and microbial natural products, specialty chemicals, and biofuels. With continued advancements in synthetic biology, machine learning, and high-throughput screening, the microbial production of bioactive compounds is becoming increasingly efficient and scalable, unlocking new industrial opportunities.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
