# Inflammatory Bowel Disease: From Pre-clinical Models into Translation

### Message from the Guest Editor

Numerous biological targets have been suggested to provide protective effects in experimental colitis models. However, currently, only a few of the identified molecules have been established for the treatment of inflammatory bowel disease (IBD) in patients. In this collection, we want to summarize the pitfalls and fallacies associated with the lack of translation from pre-clinical models into clinics, which might be at least in part due to the fact that many different clinical entities are summarized under the umbrella of IBD. Since *IJMS* is a journal of molecular science, pure clinical studies are not suitable for our journal. However, clinical submissions with biomolecular experiments are welcomed. We encourage the authors to reveal new molecular mechanisms in their research.

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore  
- Q1 (Organic Chemistry)
