## Advances in Bcl-xL Research

## Message from the Guest Editor

The oncogene Bcl-xL is an anti-apoptotic member of the Bcl-2 family that was established as a major survival factor in erythroid lineage and neuronal cells. More recently, Bcl-xL also emerged as being responsible for the resistance of malignant tumor cells to anti-cancer treatments. Over the last decade, refined description of its regulation revealed that several mechanisms are at work that make Bcl-xL instrumental in the control of survival, proliferation, and differentiation. These mechanisms comprise post-translational modifications, the dynamic interactions this protein establishes with its target membranes, and also its interactions with binding partners within and outside the Bcl-2 family of proteins. This Special Issue of IJMS will focus on how Bcl-xL is regulated at the protein level, its organization in the membrane, the plasticity of its interactome, and how it warrants a diversity of cellular functions controlled by Bcl-xL in physiology and pathology. Articles submitted can either provide a review of specific points of the literature, or be original works offering significant advances in the structure and functions of Bcl-xL.

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## **Author Benefits**

## **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.
