Contribution of Cancer-Targeting Drugs toward Faster Clinical Application 2.0

Message from the Guest Editor

In this Research Topic, we aim to identify and investigate the novel applications of cancer-targeting drugs, including: 1. products derived from original drugs, 2. drug repositioning, 3. experimental drugs soon to be available for testing in clinical trials, and 4. natural products. In our investigations, we also plan to include the pharmacokinetics and pharmacodynamics of combination drug treatments offering improvements over current therapies. We expect that our findings will encourage the faster initiation of clinical trials as well as therapeutic application.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
