Cisplatin in Cancer Therapy: Molecular Mechanisms of Action 3.0

Message from the Guest Editors

Complete elucidation of the mechanism of action of platinum-based drugs is a fundamental and high-priority task that could potentially allow the amelioration or elimination of the severe side effects accompanying patient treatment. Another important challenge is to understand in detail the nature of the intracellular pathways that are affected by the platinum--DNA adducts, which are responsible for developing resistance to platinum drugs and for the differential response of tumors to these drugs platinum (ie, cisplatin and oxaliplatin have different activities toward colorectal cancer). We think that the study of the molecular determinants involved in the mechanism of action of cisplatin and its analogs is an extremely important interdisciplinary field that requires the collaboration of chemists, biologists, pharmacologists, and physicians who, in some cases, do not always communicate on the same level. While the stakes are high, we are confident that the uncertainties in the mechanism of action of cisplatin can be elucidated in the next decade and in time to celebrate the 50th anniversary of the FDA's approval of cisplatin.

Guest Editors

Dr. Nicola Margiotta

Dr. James D. Hoeschele

Dr. Valentina Gandin

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
