Proteolytic Control of Deubiquitinating Enzymes in Health and Disease

Message from the Guest Editor

For cellular homeostasis, the regulation of selective proteolysis is largely mediated by the posttranslational modification with the coordinated addition and removal of ubiquitin by the ubiquitin–proteasome system. By antagonizing ubiquitination, deubiquitinating enzymes (DUBs) regulate the stability or function of proteins, allowing regulation of protein turnover, diverse signaling pathways, and DNA damage response. Dysregulated DUBs are increasingly being identified as a causative in various human diseases, such as neurodegenerative disorder and cancer. Therefore, a better understanding of the molecular mechanisms will provide new insights into the development of more specific therapeutic approaches. This Special Issue of the *International Journal of Molecular Sciences* will focus on the role of DUBs, including new insights into diseases, and articles submitted can either be original research works regarding DUBs or full reviews; however, we kindly encourage authors to provide short and highly focused reviews on specific and hot topics related to human disease.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
