

## Special Issue

# Enzyme Inhibitors and Activators in Cancer Research, Therapy and Prevention

### Message from the Guest Editor

Modulating enzyme activity is a proven strategy in drug discovery, as shown by the small-molecule armament of marketed drugs that is directed against enzymes.

Rationales for targeting enzymes are typically based on their pivotal roles in disease states, and the possibility of designing chemical entities capable of docking sensitive ligand-binding sites. Experimental platforms may include the development of different types of inhibitors, as well as suicide inactivators, allosteric inducers and modulators, and antimetabolites, thereby suggesting a wide array of research avenues. This area of research can take advantage of, and be expedited by, major advances in target identification and validation, production of natural product and chemical libraries, nutraceutical research, cell-free and cell-based assay methods, high-throughput screening technologies, hyphenated techniques, as well as cheminformatics and bioinformatics resources.

For this Special Issue, we will consider original articles and reviews that concerning the identification of chemicals that, by impacting enzyme activities, can be proved to be biologically or pharmacologically relevant to Cancer Research.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Editor-in-Chief

Prof. Dr. José L. Quiles  
Department of Physiology, Institute of Nutrition and Food Technology  
"Jose Mataix", Biomedical Research Center, University of Granada,  
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
