Special Issue

Male Fertility: New Horizons for Investigating Reproductive System Diseases

Message from the Guest Editor

In the last decade, there have been unprecedented advances in research on reproductive system diseases that impact male fertility, largely thanks to developments in biotechnology. These include techniques such as scRNA-Seg-based transcriptome profiling, 3D genome structural analysis and spatial transcriptome atlas of testes at near-single-cell resolution, and other highresolution techniques. In this Special Issue, we seek to provide up-to-date reviews of advances in reproductive system diseases; thought-provoking conceptualizations of their biology and etiology; and research on the treatment of reproductive diseases. We also seek to better understand the challenges that we are facing in terms of infertility, and diseases of the testis, the epididymis, and the prostate, which collectively impact the status of fertility in humans. This collection of review articles from a diverse group of active basic research scientists and clinicians/scientists will appeal to both senior investigators and those early in their career.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
