Genomics of Brain Disorders 4.0

Message from the Guest Editor

Brain disorders represent the third major problem of health and disability in developed countries after cardiovascular disorders and cancer. The primary cause of most brain disorders is poorly understood. In NPDs there is a convergence of multiple genomic defects distributed across the human genome with epigenetic phenomena and environmental risk factors leading to the phenotypic expression of the disease. In children, neurodevelopmental disorders are determinant for abnormal brain maturation and early mental derailment. In age-related neurodegenerative disorders, a common feature is the presence of intracellular and/or extracellular deposits of abnormally processed proteins that represent prototypical hallmarks probably contributing to premature neuronal death. A better characterization of the genomic background of mental and neurological disorders is necessary for elucidating disease-specific pathogenesis, as well as the identification of accurate biomarkers, and the implementation of novel treatments addressing pathogenic, mechanistic, metabolic, transporter and pleiotropic genes, and their products, associated with specific NPDs.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
