Improvement of Cardiac Function in Heart Failure

Message from the Guest Editor

Heart Failure is a complex syndrome with multiple causes and is responsible for high morbidity and mortality worldwide, especially in the elderly. The prognosis of heart failure patients remains poor, despite recent advances in the management of heart failure. Therefore, there is a need for new treatment strategies improving the clinical outcomes, such as therapies targeting cellular mechanisms of heart failure including inflammatory processes, oxidative stress, as well as abnormalities in perfusion, molecular mechanisms, electrical conduction, autoimmunity and ventricular remodeling. This special issue discusses not only the pathophysiology of heart failure but also biomarker and therapy development to improve cardiac function in heart failure.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
