Protease and Carbonic Anhydrase Inhibitors and Their Roles in Pathological Processes

Message from the Guest Editor

Proteases and carbonic anhydrases are among the most widespread enzymes in organisms all over the phylogenetic tree, in which they play crucial physiological roles. Protease inhibitors targeting all classes of such known enzymes are widely used as antivirals (against HIV and hepatitis C infections), antithrombotics (targeting serine proteases involved in the blood coagulation cascade), whereas inhibitors of other proteases, such as matrix metalloproteinases, have found fewer applications due to their toxicity problems. Carbonic anhydrase inhibitors, on the other hand, are used as antiglaucoma, antiepileptic, antiobesity, and as diuretic drugs, whereas newer applications target metastatic tumors, both for treatment and imaging, with one small molecule and one antibody in advanced clinical trials. Antiinfectives, based on inhibition of carbonic anhydrases from pathogenic bacteria, fungi, and protozoa, have also begun to be investigated. The present Special Issue welcomes contributions dealing with all aspects connected to the chemistry, biochemistry, pharmacology and toxicology of this important class of enzyme inhibitors.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
