Kidney Injury: From Molecular Basis to Therapies 2.0

Message from the Guest Editor

"Kidney injury" occurs at various stages of kidney disease. Renal fibrosis from kidney injury is a common pathway for the progression to chronic kidney disease (CKD). Despite the significant burden of CKD, specific therapies to prevent its incidence and progression remain limited. Therefore, novel therapies to prevent the decline of kidney function are needed. This Special Issue of the *International Journal of Molecular Sciences* will focus on "Kidney Injury: From Molecular Basis to Therapies". It will include papers investigating the pathological mechanisms of CKD and experimental and clinical studies examining potential treatments to attenuate kidney dysfunction. In addition, works exploring the progression from acute kidney injury to CKD are welcome.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
