Leptin and Obesity: New Discoveries and Future Perspectives

Message from the Guest Editors

Twenty-five years ago, leptin, a hormone produced and secreted by adipose tissue was discovered. From the first moment it was given a key role in the field of obesity, which also integrated different endocrine organs and physiological processes in the control of food intake and energy balance. However, the great therapeutic hopes of leptin in the treatment of obesity suddenly vanished, probably due to the lack of knowledge of the molecular mechanisms responsible for its effects. Even so, the research developed with leptin has made great contributions in the field of obesity. However, during the last few years very important advances have been evidenced in some of the mechanisms of action responsible for its effects on body weight control. All of this has meant a rejuvenated interest in this hormone that one day could lead to the much desired therapy against obesity. In this Special Issue we welcome contributions related to any aspect of leptin and obesity. The idea is to provide readers with an idea of the mechanisms by which leptin exerts its effects on body weight regulation and its physiological relevance, mentioning the most recent and exciting discoveries.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
