Lipid as a Cancer Therapeutic Target

Message from the Guest Editors

Lipids are important players in physiological and pathophysiological processes and interesting targets for mostly incurable diseases like cancer. Prostaglandin E2 (PGE2) and sphingosine-1 phosphate (S1P) are well-known lipids that promote cancer growth. However, other lipids are also deregulated in cancer and interfering with the synthesis or binding of these lipids are promising approaches for cancer therapy. This Special Issue will summarize current knowledge of therapeutics that target lipids as a new treatment option for cancer therapy. We invite researchers in the broad field of sphingolipids, cholesterol, prostaglandins, leukotrienes, and phospholipids to contribute to this Special Issue.

Guest Editors

Prof. Dr. Elisabetta Albi
Prof. Dr. Sabine Groesch

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
