Molecular Links between Periodontitis and Systemic Diseases

Message from the Guest Editor

Periodontitis is one of the most prevalent diseases globally. It is a polymicrobial infection and multifactorial disease characterized by chronic inflammation in the periodontium. If left untreated, this condition leads to alveolar bone destruction and subsequently induces tooth loss, during which major periodontopathic bacteria, are known to be involved in the induction of proinflammatory cytokine production. Recently, periodontopathic bacteria have been involved in respiratory diseases, including aspiration pneumonia and chronic obstructive pulmonary disease, and other systemic diseases, such as diabetes and cardiovascular disease. Conversely, oral care, including periodontal treatment, prevents the onset of pneumonia and the exacerbation of COPD and diabetes. However, how periodontopathic bacteria contribute to those systemic diseases remains unclear. To that end, it is crucial to explain how periodontopathic bacteria adversely affect systemic diseases at the molecular level, we would like to provide important aspects of the molecular events by periodontopathic bacteria, focusing on periodontitis and related systemic diseases.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
