Functional Modification of Neuronal Networks

Message from the Guest Editor

Cognitive processes, as well as neuropsychiatric diseases, involve functional modification of neuronal networks through the reorganization of existing synapses. The underlying mechanism of neuronal plasticity is complex and many aspects remain elusive. Recent studies have highlighted the importance of protein posttranslational modifications. S-palmitoylation reversibly modifies numerous classes of neuronal proteins, and, thus, it is necessary to understand the complexity and dynamics of synaptic proteins modifications under physiological and pathological context. The function of synaptic proteins, receptors, and ion channels can be also modulated by another posttranslational modification known as proteolysis. In the Special Issue, we will focus on the role of posttranslational modifications of synaptic proteins under physiological stimuli and following pathological conditions. We will also assess the role of serotonin receptor-mediated signaling in the development and maintenance of pathophysiological conditions, suggesting serotonin receptors as targets for the treatment of neurodegenerative diseases.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
