

## Special Issue

# Omics Approaches to Metabolic Disorders

### Message from the Guest Editor

Over the last few years, the application of omics approaches (e.g., genomics, transcriptomics, proteomics, metabolomics and metagenomics) has contributed to a greater understanding of the aetiology of many metabolic disorders. Particularly, these new high-throughput technologies have greatly advanced the ability to identify biomarkers, disease-related genes and targets for potential therapeutic strategies. Therefore, omics tools have great potential to open new avenues towards the prevention, diagnosis, prognosis and treatment of metabolic disorders. In this Special Issue titled "Omics Approaches to Metabolic Disorders", we welcome submissions of original research and review articles presenting new insights into the molecular aspects of metabolic disorders. Studies devoted to biomarker discovery and dietary/treatment responses using omics analysis are highly encouraged.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
