Cell Therapy for Parkinson's Disease

Message from the Guest Editors

Cell therapy offers a complete paradigm shift from current treatments, as this approach holds the potential to stop or even reverse the progression of the disease. Pioneering preclinical studies on dopaminergic transplants and decades of advances in neuron regeneration paved the way for considering cell-based therapies suitable for clinical translation. The field is now entering a new phase where clinical-grade products based on pluripotent stem cells are being trialed in patients. Moreover, the development of potential new therapies, based on tissue engineering and gene therapy, is really breaking new ground in the field. Despite the encouraging results obtained in preclinical studies, translational application of these therapies has not been at the desired level and further studies are undoubtedly needed. **The aim of this Special Issue is to broaden the knowledge on the use of regenerative medicine, especially focused on innovative cell therapy strategies, as potential approaches for the treatment of Parkinson's disease.**

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
